

Unit/Course/Team Name

University of Arizona College of Veterinary Medicine Instructional Design (ID) Team

Effective Date

to be determined by the team upon adoption of this policy

Purpose

The purpose of this policy is to ensure protection of data when incorporating AI into ID workflows.

Scope

This policy covers any activities in which any member of the ID team is working with a generative AI tool to aid in completion of work tasks.

Key Definitions

AI-generated content refers to output(s) created by a generative AI tool such as Microsoft Copilot or Google Gemini.

AI-assisted content refers to output(s) created by a user in collaboration with a generative AI tool, whether incorporating ideas, organization, or content (text, video, audio, etc.) created by the tool.

Approved AI tool refers to any tools to which access is granted by the University of Arizona.

Permitted Uses

1. Use of approved AI tools to work with your own content and ideas is permitted.
2. Use of approved AI tools for organization and productivity is permitted.
3. Use of approved AI tools to work with anonymized faculty-generated content for the purposes of improving student learning experiences and outcomes is permitted.

Restricted Uses

1. Use of non-approved AI tools with any content you have not created is not permitted.
2. Any student work (feedback, exam responses) should be anonymized (names and e-mail addresses removed) before they are used in any way in an approved AI tool.
3. Creators of other content (college staff and faculty) should be consulted before it is used in an approved AI tool; generally, if you would want someone to ask first if it were your content, you should also ask permission.

Disclosure Requirements

Novel uses of AI should be discussed in ID team meetings to establish team norms of appropriacy as well as to keep everyone apprised of what is possible. Once uses become routine, they do not require disclosure.

Review Date

This policy is to be reviewed one year after its adoption and then annually thereafter.
