

Annotation 1: Compelling Claim

Quote or paraphrase with section number	Argument type	Why this claim is analytically compelling
LLMs can produce text which seems coherent (Section 6.1)	documentation argument	The authors present text (cited from another study) which demonstrates the seeming coherence of LM-generated content.

Annotation 2: Compelling Claim

Quote or paraphrase with section number	Argument type	Why this claim is analytically compelling
“The ersatz fluency and coherence of LMs raises several risks, precisely because humans are prepared to interpret strings belonging to languages they speak as meaningful and corresponding to the communicative intent of some individual or group of individuals who have accountability for what is said.” (Section 6.2)	epistemic/comprehension argument	It presents an aspect of communication that doesn’t typically occur to us because it’s so basic that we don’t have to think about it. It only matters because, at least for the authors, LM-generated content does not have this characteristic.

Annotation 3: Compelling Claim

Quote or paraphrase with section number	Argument type	Why this claim is analytically compelling
story of a Palestinian man detained by Israeli police as a result of an error in machine translation (Section 6.2)	documentation argument	It presents a clear example in which the kind of machine translation errors that the authors are warning about have already caused harm.

Annotation 4: Challenge Claim

Quote or paraphrase with section number	Argument type	Why this claim is analytically challenging
LMs “cheat [their] way through tests” (Section 5)	epistemic/comprehension argument (also a moral/ethical argument, but that wasn’t one of the choices)	It anthropomorphizes LMs. If we accept the authors’ argument that LMs are incapable of coherence because they cannot understand meaning, then surely we cannot ascribe intent to them, which would be necessary in order to “cheat.” Wei et al.’s (2022) evidence at least suggests that LMs may be capable of reasoning, so I don’t think we can dismiss the idea so cavalierly.
